Fillout

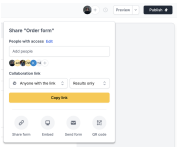
Body content

We've shipped a ton already in 2025. Here's all that's new ↓

🤝 Easier collaboration

Share a single form with a teammate with read or write permissions.

Or, enable a magic link that grants access to a form or its results.



📄 Dynamically name generated PDF documents

Based on form fields or any information in your forms.

🗃️ Table field

Collect multiple rows of data with the new table field. Let respondents specify how many items they want to add.

Note: the table field can be connected to webhooks, Zapier and Make (native integrations coming soon!).

🗑️ Delete submissions via API

Delete form responses with the new REST API endpoint.

🕓 Edit history

Views changes made to your forms and scheduling links.

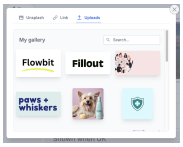
Plus, see who connected which 3rd party apps in admin settings.

🔀 Conditionally render PDF fields

Add fields to a PDF only if they meet a certain condition.

🖼️ Organization asset gallery

Easily reuse images across your forms, like logos or media assets.



🐞 Fixes and improvements

- Duplicating and exporting forms includes any attached workflows.
- Currencies are now formatted in generated PDFs.
- Fixed an issue where voice recordings were not included in CSV exports.
- Added support for easily showing the Stripe payment receipt on ending pages.
- Many, many minor fixes and improvements.
